

**ANNUAL EXAMINATION – 2013**  
INTERNAL ASSESSMENT TO LISTENING SKILL (ENGLISH)  
Class – I X  
Aural

M.M.: 10

When we think of trees, we think of their cool and refreshing shade, of children playing around them and of tired travellers resting under them. Trees give us fruit to eat and firewood to burn. We build houses and make furniture with the wood of the trees. If the paper on which this book is printed could tell its own story, it would perhaps tell you that once it was a tree on some hillside. Trees out of which the furniture in your classroom – the benches and chairs – is made perhaps grew in the forests of Assam or Kerala.

Trees not only supply us with many of the conveniences of our daily life; they do much more than that. They support the life of living things. They help to replace the oxygen that gets used up when living things breath. We know that if our oxygen supply is stopped, we will not be able to live for long. The oxygen in the air is constantly being used up and turned into carbon dioxide when animals breath and things burn. The green leaves of trees, in fact of all plants, absorbs the carbon dioxide from the air, and with help of sunlight break it up into carbon and oxygen; and the carbon is used to make starch and the oxygen is released into the atmosphere. That is how trees help to replace the oxygen in the atmosphere, which is constantly being used up.
